

**WP6- NA6: Integration, outreach, and sustainability**  
**Deliverable D6.19: Report on the status of international associationship with ACTRIS outside the Consortium**

ACTRIS strongly emphasizes involvement of research institutions active in the field of aerosols, clouds, and trace gases from outside the Consortium to associate with the project. This is managed by the Coordination office has been implemented through an open and continuous [call for Associated Partners](#). Data quality is a central issue and ensured within the network, and spreading of good practice is promoted within entire scientific community. In order to ensure a broad dissemination of standardized methods used within the network we strongly promote high-quality collaboration and training of young scientists and researchers from outside the Consortium, eastern European and non-EU developing countries in the field of atmospheric observation through active participation in workshops and training exercises, and involvement of e.g. SMEs in the development of new technologies. Only associated partners fitting the ACTRIS standards are included in the network as a station (i.e., the level of implication among the associated partners is different, some operate stations which contribute to the network, others only represent potential users of the infrastructure). The accession of each associated partners is made on a case-by-case basis, proposed by the SSC and approved by the Consortium members. A confidentiality agreement is established in order to protect the intellectual property rights and project results.

*Figure 1. Geographical representation of associated partners involved in ACTRIS since the beginning of the project (status M38).*

After 38 months of project start, ACTRIS has 69 associated partners from 29 different countries (18 European, 7 East European, and 4 outside Europe), 11 associated partners represent SMEs (Figure 1). The associated partners are mostly involved in the networking activities (52%) and joint research activities (22%), see Table 1 for details.

*Table 1. List of institutions involved in ACTRIS as associated partner. The associated partners 1-18 (shaded in grey) are those identified at project start (cf. Annex I), the asterisk denotes SMEs.*
